Overview

- The new modular miniature controller from the SIMATIC S7 family
- Consisting of:
- controller with integrated PROFINET interface for communication with programming device, HMI or other SIMATIC controllers
- powerful, integrated technology functions such as counting, measuring, closed-loop control, and motion control
- integrated digital and analog inputs/outputs
- signal boards for direct use in a controller
- signal modules for expansion of controllers by input/output channels
- communication modules for expansion of controllers by communications interfaces
- accessories, e.g. power supply, switch module or SIMATIC Memory Card
- The miniature controller that offers maximum automation at minimum cost
- Extremely simple installation, programming and operation
- Large-scale integration, space-saving, powerful
- Suitable for small to medium-size automation engineering applications
- Can be used both for simple controls and for complex automation tasks
- All CPUs can be used in stand-alone mode, in networks and within distributed structures
- Suitable for applications where programmable controllers would not have been economically viable in the past
- With exceptional real-time performance and powerful communication options

## Application

The SIMATIC S7-1200 is the controller for open-loop and closedloop control tasks in mechanical equipment manufacture and plant construction. It combines maximum automation and minimum cost.
Due to the compact modular design with a high performance at the same time, the SIMATIC S7-1200 is suitable for a wide variety of automation applications. Its range of use extends from the replacement of relays and contactors up to complex automation tasks in networks and within distributed structures.

The S7-1200 also increasingly opens up areas for which special electronics was previously developed for economical reasons.
Application examples include, for example:

- Placement systems
- Conveyor systems
- Elevators and escalators
- Material transportation equipment
- Metalworking machinery
- Packaging machines
- Printing machines
- Textile machines
- Mixing systems
- Freshwater treatment plants
- Wastewater treatment plants
- External displays
- Electricity distribution stations
- Room temperature control
- Heating/cooling system control
- Energy management
- Fire protection systems
- Air conditioning
- Lighting control
- Pump control
- Security/access control systems

## Design

The SIMATIC S7-1200 family consists of the following modules:

- 3 compact controllers with graded performances in different versions as wide-range AC or DC controllers
- 2 signal boards (analog and digital) for low-cost modular controller expansion directly on the CPU, with retention of the mounting space
- 13 different digital and analog signal modules
- 2 communication modules (RS232/RS485) for communication via point-to-point connection
- Ethernet switch with 4 ports for implementation of many different network topologies
- PS 1207 stabilized power supply units, line voltage 115/230 V AC, rated voltage 24 V DC
Mechanical features
- Rugged, compact plastic enclosure
- Easily accessible connection and control elements, protected by front flaps
- Removable connection terminals, also for analog or digital expansion modules
Device features
- International standards: SIMATIC S7-1200 complies with the standards according to VDE, UL, CSA and FM (Class I, Category 2;
Danger zone groups A, B, C and D, T4A). The quality management system used during production is certified according to ISO 9001

Design (continued)

## Communication

The SIMATIC S7-1200 is equipped with different communication mechanisms:

- Integral PROFINET interface
- Point-to-point connection via communication modules

PROFINET interface
The integral PROFINET interface permits communication with:

- Programming device
- HMI devices
- Other SIMATIC controllers

The following protocols are supported:

- TCP/IP
- ISO-on-TCP
- S7 communication

The following can be connected:
Field PG programming device and PCs via standard CAT5 cable.

Connection between PG and CPU of SIMATIC S7-1200

- SIMATIC HMI Basic Panels

[^0]- Further SIMATIC S7-1200 controllers

Connection of several devices via CSM 1277 Ethernet switch

Point-to-point interface, freely-programmable interface mode
Communication modules permit communication via point-topoint connections. The RS232 and RS485 physical transmission media are used. Data transmission is carried out in the "Freeport" mode of the CPU. A user-specific, bit-oriented communication protocol is used (e.g. ASCII protocol, USS, or MODBUS).
Any terminal equipment with a serial interface can be connected, e.g. drives, printers, bar code readers, modems, etc.

Point-to-point connection via CM 1241 in programmable interface mode

## Introduction

## S7-1200

## Function

The S7-1200 is characterized by:

- Extremely simple starter solution: Special starter packages and introductions facilitate familiarization.
- Uncomplicated operation:

Powerful standard commands which are simple to use, together with the user-friendly programming software, reduce the programming overhead to a minimum.

- Exceptional real-time characteristics: Special interrupt functions, fast counters, and pulse outputs permit use even with time-critical processes.
The SIMATIC S7-1200 meets national and international standards:
- UL 508
- CSA C22.2 No. 142
- FM Class I, div. 2, group A, B, C, D; T4A Class I, Zone 2, IIC, T4
- VDE 0160
- EN 61131-2
- Requirements of the EMC directive in accordance with EN 50081-1, 50081-2 and 50082-2

## Technical specifications

## More information

## Brochures

Information material for downloading can be found in the Internet:
http://www.siemens.com/simatic/printmaterial

## Overview

- The clever compact solution
- With 10 integral input/outputs
- Expandable by:
-1 signal board (SB)
- max. 3 communication modules (CM)

## Design

The compact CPU 1211C has:

- 3 device versions with different power supply and control voltages.
- Integrated power supply either as wide-range AC or DC power supply ( 85 to 264 V AC or 24 V DC)
- Integrated 24 V encoder/load current supply: For direct connection of sensors and encoders. With 300 mA output current also for use as load power supply.
- 6 integrated digital inputs 24 VDC (current sinking/current sourcing (IEC type 1 current sinking)).
- 4 integrated digital outputs, either 24 V DC or relay.
- 2 integrated analog inputs 0 to 10 V .
- 2 pulse outputs (PTO) with a frequency of up to 100 kHz .
- Pulse-width modulated outputs (PWM) with a frequency of up to 100 kHz .
- Integrated Ethernet interface (TCP/IP native, ISO-on-TCP)
- 3 fast counters ( 100 kHz ), with parameterizable enable and reset inputs, can be used simultaneously as up and down counters with separate inputs or for connecting incremental encoders.
- Expansion by additional communication interfaces, e.g. RS485 or RS232
- Expansion by analog or digital signals directly on the CPU via signal board (with retention of CPU mounting dimensions)
- Optional memory expansion (SIMATIC Memory Card)
- PID controller with auto-tuning functionality
- Integral real-time clock
- Interrupt inputs:

For extremely fast response to rising or falling edges of process signals.

- Removable terminals on all modules
- Simulator (optional):

For simulating the integrated inputs and for testing the user program.

| Device versions |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Version | Supply voltage | Input voltage DI | Output voltage DO | Output current |
| - DC/DC/DC | 24 V DC | 24 V DC | 24 V DC | 0.5 A, transistor |
| - DC/DC/relay | 24 V DC | 24 V DC | $\begin{aligned} & 5 \ldots 30 \vee \mathrm{DC} / \\ & 5 \ldots 250 \mathrm{VAC} \end{aligned}$ | 2 A; 30 W DC / <br> 200 W AC |
| - AC/DC/relay | 85 ... 264 V AC | 24 V DC | $\begin{aligned} & 5 \ldots 30 \vee \mathrm{DC} / \\ & 5 \ldots 250 \vee \mathrm{AC} \end{aligned}$ | $\begin{aligned} & 2 \mathrm{~A} ; \\ & 30 \mathrm{~W} \mathrm{DC} \mathrm{I} \\ & 200 \mathrm{~W} \mathrm{AC} \end{aligned}$ |

## SIMATIC S7-1200 Central processing units

## CPU 1211 C

## Function

- Comprehensive instruction set:

A wide range of operations facilitate programming

- basic operations such as binary logic operations, result allocation, save, count, create times, load, transfer, compare, shift, rotate, create complement, call subprogram (with local variables)
- integral communication commands (e.g. USS protocol, Modbus RTU, S7 communication "T-Send/T-Receive" or Freeport)
- user-friendly functions such as pulse-width modulation, pulse sequence function, arithmetic functions, floating point arithmetic, PID closed-loop control, jump functions, loop functions and code conversions
- mathematical functions, e.g. SIN, COS, TAN, LN, EXP
- Counting:

User-friendly counting functions in conjunction with the integrated counters and special commands for high-speed counters open up new application areas for the user

- Interrupt processing:
- edge-triggered interrupts (activated by rising or falling edges of process signals on interrupt inputs) support a rapid response to process events
- time-triggered interrupts
- counter interrupts can be triggered when a setpoint is reached or when the direction of counting changes
- communication interrupts allow the rapid and easy exchange of information with peripheral devices such as printers or bar code readers
- Password protection
- Test and diagnostics functions: Easy-to-use functions support testing and diagnostics, e.g. online/offline diagnostics
- "Forcing" of inputs and outputs during testing and diagnostics: Inputs and outputs can be set independently of cycle and thus permanently, for example, to test the user program
- Motion Control in accordance with PLCopen for simple movements
- Library functionality

## Programming

The STEP 7 Basic programming package permits complete programming of all S7-1200 controllers and the associated I/O.

## Overview

- The superior compact solution
- With 14 integral input/outputs
- Expandable by:
-1 signal board (SB)
- 2 signal modules (SM)
- Max. 3 communication modules (CM)

## Design

The compact CPU 1212C has:

- 3 device versions with different power supply and control voltages
- Integrated power supply either as wide-range AC or DC power supply ( 85 to 264 V AC or 24 V DC)
- Integrated 24 V encoder/load current supply: For direct connection of sensors and encoders. With 300 mA output current also for use as load power supply
- 8 integrated digital inputs 24 V DC (current sinking/current sourcing (IEC type 1 current sinking))
- 6 integrated digital outputs, either 24 V DC or relay
- 2 integrated analog inputs 0 to 10 V
- 2 pulse outputs (PTO) with a frequency of up to 100 kHz
- Pulse-width modulated outputs (PWM) with a frequency of up to 100 kHz
- Integrated Ethernet interface (TCP/IP native, ISO-on-TCP)
- 4 fast counters ( 3 with max. 100 kHz ; 1 with max. 30 kHz ), with parameterizable enable and reset inputs, can be used simultaneously as up and down counters with 2 separate inputs or for connecting incremental encoders
- Expansion by additional communication interfaces, e.g. RS485 or RS232
- Expansion by analog or digital signals directly on the CPU via signal board (with retention of CPU mounting dimensions)
- Expansion by a wide range of analog and digital input and output signals via signal modules
- Optional memory expansion (SIMATIC Memory Card)
- PID controller with auto-tuning functionality
- Integral real-time clock
- Interrupt inputs:

For extremely fast response to rising or falling edges of process signals

- Removable terminals on all modules
- Simulator (optional):

For simulating the integrated inputs and for testing the user program

| Device versions |  |  |  |  |

## SIMATIC S7-1200 Central processing units

## CPU 1212C

## Function

- Comprehensive instruction set:

A wide range of operations facilitate programming

- basic operations such as binary logic operations, result allocation, save, count, create times, load, transfer, compare, shift, rotate, create complement, call subprogram (with local variables)
- integral communication commands (e.g. USS protocol, Modbus RTU, S7 communication "T-Send/T-Receive" or Freeport)
- user-friendly functions such as pulse-width modulation, pulse sequence function, arithmetic functions, floating point arithmetic, PID closed-loop control, jump functions, loop functions and code conversions
- mathematical functions, e.g. SIN, COS, TAN, LN, EXP
- Counting:

User-friendly counting functions in conjunction with the integrated counters and special commands for high-speed counters open up new application areas for the user

- Interrupt processing:
- edge-triggered interrupts (activated by rising or falling edges of process signals on interrupt inputs) support a rapid response to process events.
- time-triggered interrupts.
- counter interrupts can be triggered when a setpoint is reached or when the direction of counting changes.
- communication interrupts allow the rapid and easy exchange of information with peripheral devices such as printers or bar code readers
- Password protection
- Test and diagnostics functions: Easy-to-use functions support testing and diagnostics, e.g. online/offline diagnostics
- "Forcing" of inputs and outputs during testing and diagnostics: Inputs and outputs can be set independently of cycle and thus permanently, for example, to test the user program
- Motion Control in accordance with PLCopen for simple movements
- Library functionality

## Programming

The STEP 7 Basic programming package permits complete programming of all S7-1200 controllers and the associated I/O.

## Overview

- The compact high-performance CPU
- With 24 integral input/outputs
- Expandable by:
- 1 signal board (SB)
- 8 signal modules (SM)
- max. 3 communication modules (CM)

## Design

The compact CPU 1214C has:

- 3 device versions with different power supply and control voltages
- Integrated power supply either as wide-range AC or DC power supply ( 85 to 264 V AC or 24 V DC)
- Integrated 24 V encoder/load current supply: For direct connection of sensors and encoders. With 400 mA , the output current can also be used as load power supply
- 14 integrated digital inputs 24 V DC (current sinking/current sourcing (IEC type 1 current sinking))
- 10 integrated digital outputs, either 24 V DC or relay
- 2 integrated analog inputs 0 to 10 V
- 2 pulse outputs (PTO) with a frequency of up to 100 kHz
- Pulse-width modulated outputs (PWM) with a frequency of up to 100 kHz
- Integrated Ethernet interface (TCP/IP native, ISO-on-TCP)
- 6 fast counters ( 3 with max. 100 kHz ; 3 with max. 30 kHz ), with parameterizable enable and reset inputs, can be used simultaneously as up and down counters with 2 separate inputs or for connecting incremental encoders
- Expansion by additional communication interfaces, e.g. RS485 or RS232
- Expansion by analog or digital signals directly on the CPU via signal board (with retention of CPU mounting dimensions)
- Expansion by a wide range of analog and digital input and output signals via signal modules
- Optional memory expansion (SIMATIC Memory Card)
- PID controller with auto-tuning functionality
- Integral real-time clock
- Interrupt inputs:

For extremely fast response to rising or falling edges of process signals

- Removable terminals on all modules
- Simulator (optional):

For simulating the integrated inputs and for testing the user program

## CPU 1214 C

## Function

- Comprehensive instruction set:

A wide range of operations facilitate programming:

- basic operations such as binary logic operations, result allocation, save, count, create times, load, transfer, compare, shift, rotate, create complement, call subprogram (with local variables)
- integral communication commands (e.g. USS protocol, Modbus RTU, S7 communication "T-Send/T-Receive" or Freeport)
- user-friendly functions such as pulse-width modulation, pulse sequence function, arithmetic functions, floating point arithmetic, PID closed-loop control, jump functions, loop functions and code conversions
- mathematical functions, e.g. SIN, COS, TAN, LN, EXP
- Counting:

User-friendly counting functions in conjunction with the integrated counters and special commands for high-speed counters open up new application areas for the user

- Interrupt processing:
- edge-triggered interrupts (activated by rising or falling edges of process signals on interrupt inputs) support a rapid response to process events
- time-triggered interrupts
- counter interrupts can be triggered when a setpoint is reached or when the direction of counting changes
- communication interrupts allow the rapid and easy exchange of information with peripheral devices such as printers or bar code readers
- Password protection
- Test and diagnostics functions: Easy-to-use functions support testing and diagnostics, e.g. online/offline diagnostics
- "Forcing" of inputs and outputs during testing and diagnostics: Inputs and outputs can be set independently of cycle and thus permanently, for example, to test the user program
- Motion Control in accordance with PLCopen for simple movements
- Library functionality

## Programming

The STEP 7 Basic programming package permits complete programming of all S7-1200 controllers and the associated I/O.

## SIMATIC S7-1200 <br> SIPLUS central processing units

SIPLUS CPU 1211C, CPU 1212C, CPU 1214 C

## Ordering data

## SIPLUS CPU 1211C

 Compact CPU, AC/DC/relay(extended temperature range and medial exposure)
Compact CPU, AC/DC/relay;
integral program/data memory
25 KB , load memory 1 MB ;
wide-range power supply
85 ... 264 V AC;
Boolean execution times 0.1 ms per operation;
6 digital inputs,
4 digital outputs (relays),
2 analog inputs;
expandable by up to
3 communication modules and
1 signal board;
digital inputs can be used as HSC
at 100 kHz

- Ambient temperature $-25 \ldots+70^{\circ} \mathrm{C}$; number of simultaneously controllable inputs and outputs max. 50\%;
Signal Board cannot be used
- Ambient temperature $-25 \ldots+55^{\circ} \mathrm{C}$ without restrictions; Signal Board can be used

## SIPLUS CPU 1211C

Compact CPU, DC/DC/DC
(extended temperature range and medial exposure)
integral program/data memory 25 KB, load memory 1 MB;
power supply 24 V DC;
Boolean execution times 0.1 ms per operation;
6 digital inputs,
4 digital outputs,
2 analog inputs;
expandable by up to 3 communication modules, 2 signal modules and 1 signal board;
digital inputs can be used as HSC at $100 \mathrm{kHz}, 24 \mathrm{~V}$ DC digital outputs can be used as pulse outputs (PTO) or pulse-width modulated outputs (PWM) with 100 kHz

- Ambient temperature $-25 \ldots+70^{\circ} \mathrm{C}$;
number of simultaneously controllable inputs and outputs max. 50\%; Signal Board cannot be used
- Ambient temperature $-25 \ldots+55^{\circ} \mathrm{C}$;
without restrictions; Signal Board can be used

## SIMATIC S7-1200

SIPLUS central processing units
SIPLUS CPU 1211 C, CPU 1212C, CPU 1214 C

C: Subject to export regulations: AL: N and ECCN: EAR99H

## SM 1221 digital input module

Overview

- Digital inputs as supplement to the integral I/O of the CPUs
- For flexible adaptation of the controller to the relevant task
- For subsequent expansion of the system with additional inputs

## Application

Digital input modules allow the connection of the controller to digital signals of the process.
This provides users with the following advantages:

- Optimum adaptation:

With signal modules which can be mixed as desired, users can adapt their controllers exactly to the relevant task. This avoids superfluous investments. Modules with 8, 16, and 32 input/output channels are available.

- Flexibility:

If the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple.

## Function

The SM 1221 digital input signal modules convert the level of the external digital signals from the process into the internal signal level of the S7-1200.

## Digital modules

## SB 1221 digital input module

Overview

- Digital inputs as a supplement to the integral I/O of SIMATIC S7-1200 CPUs
- Can be plugged directly into the CPU

## Application

The SB 1221 Signal Board digital input modules enable connection of the controller to digital process signals.

## Design

The Signal Boards are plugged straight into the holder on the front of the S7-1200-CPU.

- Mounting:

Signal Boards are plugged direct into the SIMATIC S7-1200CPU and linked electrically and mechanically with the CPU in this way.

- The installation dimensions of the CPU remain unchanged.
- On all Signal Boards, replacement is facilitated by removable terminals ("permanent wiring").

## Function

The SB 1221 Signal Board digital input/output modules convert the level of the external digital signals from the process to the internal signal level of the S7-1200.

## SM 1222 digital output module

## Application

Digital output modules permit the output of digital signals from
This provides users with the following advantages: With signal modules which can be mixed as desired, users can adapt their controllers exactly to the relevant task. This avoids superfluous investments. Modules with 8, 16, and 32

If the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple.

The SM 1222 digital output signal modules convert the internal signal level of the SIMATIC 57-1200 into the external signal level

- Digital outputs as supplement to the integral I/O of the CPUs
- For flexible adaptation of the controller to the relevant task
- For subsequent expansion of the system with additional outputs
the controller to the process.
- Optimum adaptation: input/output channels are available.
- Flexibility:

## Function

 required by the process.

## Digital modules

SM 1223 digital inputoutput module

Overview

- Digital inputs and outputs as supplement to the integral I/O of the CPUs
- For flexible adaptation of the controller to the relevant task
- For subsequent expansion of the system with additional inputs and outputs

## Application

Digital input/output modules permit:

- Connection of the controller to digital signals of the process
- Output of digital signals from the controller to the process

This provides users with the following advantages:

- Optimum adaptation: With signal modules which can be mixed as desired, users can adapt their controllers exactly to the relevant task. This avoids superfluous investments. Modules with 8,16 , and 32 input/output channels are available.
- Flexibility:

If the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple

## Function

The SM 1223 digital input/output signal modules convert

- the level of the external digital signals from the process into the internal signal level of the S7-1200 and
- the internal signal level of the S7-1200 into the external signal level required by the process.

## SB 1223 digital input/output module

## Overview

- Digital inputs and outputs as supplement to the integral I/O of the SIMATIC S7-1200 CPUs
- Can be plugged direct into the CPU

## Application

The SB 1223 digital input/output signal module permits:

- Connection of the controller to digital signals of the process
- Output of digital signals from the controller to the process.

## Design

The signal boards are plugged directly into the receptacle on the front of each S7-1200 CPU.

- Mounting:

Signal boards are plugged directly into the SIMATIC S7-1200 CPU and are thus electrically and mechanically connected to the CPU

- The CPU mounting dimensions remain unchanged
- All signal boards are easy to replace thanks to removable connecting terminals ("independent wiring")

## Function

The SB 1223 digital input/output signal board converts

- the level of the external digital signals from the process into the internal signal level of the S7-1200 and
- the internal signal level of the S7-1200 into the external signal level required by the process

Overview

- Analog inputs for SIMATIC S7-1200
- With extremely short conversion times
- For connecting analog sensors without additional amplifiers
- For solving even more complex automation tasks

## Application

The SM 1231 analog input signal modules allow the connection of the controller to analog signals of the process.
This provides users with the following advantages:

- Optimal adaptation:

With analog signal modules, users can optimally adapt their controllers even to more complex tasks.

- Direct connection of sensors:

Up to 14 bit resolution and different input ranges permit the connection of sensors without additional amplifier.

- Flexibility:

If the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple.

## Design

The signal modules have the same design features as the basic devices.

- Installation on DIN rails:

The modules are snapped onto the rail next to the CPU on the right and are electrically and mechanically connected to each other and to the CPU by the integral slide mechanism.

- Direct installation:

Horizontal or vertical mounting on DIN rail or direct mounting in the cabinet using integral lugs.

## Function

The SM 1231 analog input signal modules convert analog signals from the process into digital signals for internal processing by the SIMATIC S7-1200.

## SM 1232 analog output module

Overview

- Analog outputs for SIMATIC S7-1200
- With extremely short conversion times
- For connecting analog actuators without additional amplifiers
- For solving even more complex automation tasks

## Application

SM 1232 analog output signal modules permit the use of analog outputs.
This provides users with the following advantages:

- Optimal adaptation:

With analog signal modules, users can optimally adapt their controllers even to more complex tasks

- Direct connection of actuators:

Up to 14 bit resolution permit the connection of actuators without an additional amplifier

- Flexibility:

If the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple

## Design

The signal modules have the same design features as the basic devices.

- Installation on DIN rails:

The modules are snapped onto the rail next to the CPU on the right and are electrically and mechanically connected to each other and to the CPU by the integral slide mechanism.

- Direct installation:

Horizontal or vertical mounting on DIN rail or direct mounting in the cabinet using integral lugs.

## Function

SM 1232 analog output signal modules convert digital signals of the SIMATIC S7-1200 into signals for controlling the respective process.

## SB 1232 analog output module

## Overview

- Analog output for the SIMATIC S7-1200
- Can be plugged direct into the CPU

## Application

The SB 1232 analog output signal board permits the use of analog outputs.

This provides users with the following advantages:

- Optimal adaptation:

Signal boards can be used where space is limited or if only a few additional inputs/outputs are required. Each S7-1200 CPU can be modularly expanded by a signal board. This does not increase the mounting space required for the controller.

- Direct connection of sensors and actuators:

Up to 14 bit resolution and different output ranges permit the connection of actuators without additional amplifier.

- Flexibility:

If the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple.

## Design

The signal boards are plugged directly into the receptacle on the front of each S7-1200 CPU.

- Mounting:

Signal boards are plugged directly into the SIMATIC S7-1200 CPU and are thus electrically and mechanically connected to the CPU.

- The CPU mounting dimensions remain unchanged.
- All signal boards are easy to replace thanks to removable connecting terminals ("independent wiring").

## Function

The SB 1232 analog output signal board converts digital signals of the S7-1200 into analog signals for the process.

## SM 1234 analog input/output module

Overview

- Analog inputs and outputs for the SIMATIC S7-1200
- With extremely short conversion times
- For connecting analog actuators and sensors without additional amplifiers
- For solving even more complex automation tasks

## Application

SM 1234 analog input/outputs permit the use of analog inputs/outputs.
This provides users with the following advantages:

- Optimal adaptation:

With analog and digital expansion modules, users can optimally match their controllers even to more complex tasks

- Direct connection of sensors and actuators: Up to 14 bit resolution plus sign and different input/output ranges permit the connection of sensors and actuators without an additional amplifier
- Flexibility:

If the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple

## Design

The SM 1234 analog input/output signal modules have the same design features as the basic devices.

- Installation on DIN rails:

The modules are snapped onto the rail next to the CPU on the right and are electrically and mechanically connected to each other and to the CPU by the integral slide mechanism.

- Direct installation:

Horizontal or vertical mounting on DIN rail or direct mounting in the cabinet using integral lugs.

## Function

The SM 1234 analog input/output signal modules

- convert analog signals from the process into digital signals for internal processing by the SIMATIC S7-1200.
- convert digital signals of the SIMATIC S7-1200 into signals for controlling the respective process.

## SM 1231 Thermocouple module

## Overview

- To measure temperatures easily and with high accuracy
- 7 common thermocouple types can be used
- Also for measurement of analog signals with low level ( $\pm 80 \mathrm{mV}$ )
- Easy to retrofit in existing systems

## Field of application

The SM 1231 thermocouple module is a highly accurate temperature sensor using standard thermocouples. Low-level analog signals in the range of $\pm 80 \mathrm{mV}$ can also be detected. The SM 1231 thermocouple modules can be used with the CPU of the S7-1200 series.

## Construction

The SM 1231 thermocouple modules have the same construction features as other modules in the S7-1200 series: Mounting on DIN rails:

- The modules are snapped onto the rails next to the CPU on the right and are connected to each other and to the CPU 12xx by means of the integrated backplane bus.
- Direct installation:

The module can also be screwed directly to the wall using the pre-drilled holes. This installation method is recommended in cases of high vibration load.

- Thermocouples: In each case, 4 thermocouples of types J, K, T, E, R, S and N can be used. They are connected directly to the module without amplifiers.
- Installation site
- Thermocouple modules should be installed in locations with low fluctuations in temperature to ensure the highest measurement and repeat accuracy.

## Function

- Different measuring ranges:

Thermocouples of types J, K, T, E, R, S and N;
Analog signal recording $\pm 80 \mathrm{mV}$.

- Testing for open lines.
- Faults caused by contact voltages at the connection between thermocouple and module are prevented; when recording analog signals ( $\pm 80 \mathrm{mV}$ ), the compensation is automatically deactivated.
- Temperature scale:

The measured temperature can be displayed in ${ }^{\circ} \mathrm{C}$ or ${ }^{\circ} \mathrm{F}$.

## More information

Brochures
Information material for downloading can be found in the Internet:
http://www.siemens.com/simatic/printmaterial

## Overview

- To measure temperatures easily and with high accuracy
- 4 inputs
- The most common resistance temperature detectors can be used
- Easy to retrofit in existing systems

## Field of application

The SM 1231 RTD modules permit high-precision temperature recording using standard resistance temperature detectors. They can be used with CPU 1211, 1212 and 1214.

## Construction

The SM 1231 RTD modules have the same construction features as other modules in the S7-1200 series:

- Mounting on DIN rails: The modules are snapped onto the rails next to the CPU on the right and are connected to each other and to the CPU 12xx by means of the integrated backplane bus.
- Direct installation:

The module can also be screwed directly to the wall using the pre-drilled holes. This installation method is recommended in cases of high vibration load.

- The most common resistance temperature detectors can be used: Pt 100, Pt 200, Pt 500, Pt 1000, Pt 10000, Ni 100, Ni 120, Ni 1000, Cu 10, FS 150, FS 30, FS 600. The resistance temperature detectors are connected directly to the module without amplifiers, whereby they must all be of the same type. The detectors can be connected with 2,3 or 4 lines.
- Installation site:

The RTD module should be installed in locations with low fluctuations in temperature to ensure the highest measurement and repeat accuracy.

- DIP switches:

The required settings, e.g. selection of the connected resistance detectors, are made using the DIP switches on the module.

## Function

- Resistance temperature detectors of types Pt 100, Pt 200, Pt 500, Pt 1000, Pt 10000, Ni 100, Ni 120, Ni 1000, Cu 10, FS 150, FS 30, FS 600.
- Temperature scale:

The measured temperature can be displayed in ${ }^{\circ} \mathrm{C}$ or ${ }^{\circ} \mathrm{F}$.

Overview

- Simulator module for program testing during commissioning and ongoing operation
- Simulation of 8 or 14 inputs

## Application

The SM 1274 simulator modules for SIMATIC S7-1200 provide users with the opportunity for testing user programs during commissioning and ongoing operation.

## Design

The input simulators are mounted on the terminal block instead of the digital inputs.
The front of the module contains:

- Input status selector switch
- Connecting brackets for secure connection with the terminal block

## Function

Program execution can be specifically influenced by setting the inputs.
The CPU reads the set input signal statuses, and processes them in the user program. The subsequent response of the controller allows conclusions to be drawn concerning program execution.

## CM 1241 communication module

## Overview

- For quick, high-performance serial data exchange via point-to-point connection
- Implemented protocols: ASCII, USS drive protocol, Modbus RTU
- Additional protocols can also be loaded
- Simple parameterization with STEP 7 Basic

## Application

The CM 1241 communication modules are used for quick, highperformance serial data exchange via point-to-point connection.
Point-to-point connection is possible to, e.g.:

- SIMATIC S7 automation systems and the systems of many other manufacturers
- Printers
- Robot controls
- Modems
- Scanners
- Bar code readers, etc.

## Design

The CM 1241 communication modules have the same design features as the basic devices.

- Installation on DIN rails:

The modules are snapped onto the rail next to the CPU on the right and are electrically and mechanically connected to each other and to the CPU by the integral slide mechanism.

- Direct installation:

Horizontal or vertical mounting on DIN rail or direct mounting in the cabinet using integral lugs.
The communication modules are equipped with the following:

- Status LEDs for indicating "Send", "Receive" and "Error"
- Communication interfaces:

Available for the RS232 and RS485 physical transmission media

## Function

The following standard protocols are available on the CM 1241 communication modules:

- ASCII:

For interfacing to third-party systems with simple transmission protocols, e.g. protocols with start and end characters or with block check characters. The interface handshake signals can be called and controlled via the user program.

- MODBUS:

For communication according to the MODBUS protocol with RTU format:

- MODBUS master:

Master-slave interfacing with SIMATIC S7 as master.

- MODBUS slave:

Master-slave interfacing with SIMATIC S7 as slave; message frame traffic from slave to slave not possible.

- USS drive protocol: Instructions for connection of USS protocol drives are especially supported. In this case, drives exchange data over RS485. It is then possible to control these drives, and to read and write parameters.
Further drivers for downloading are also available.

## Parameterization

Parameterization of the CM 1241 communication module is particularly user-friendly and simple with STEP 7 Basic:

- The user assigns the module characteristics via a parameterization environment integrated in STEP 7 Basic, e.g.:
- the implemented protocol drivers that are used.
- the driver-specific characteristics that are used.

## More information

## Brochures

Information material for downloading can be found in the Internet:
http://www.siemens.com/simatic/printmaterial

## Overview

- Unmanaged switch for connecting a SIMATIC S7-1200 to an Industrial Ethernet network with a line, tree or star topology
- Multiplication of Ethernet interfaces on a SIMATIC S7-1200 for additional connection of up to three programming devices, operator controls, and further Ethernet nodes
- Simple, space-saving mounting on the SIMATIC S7-1200 mounting rail
- Low-cost solution for implementing small, local Ethernet networks
- Connection without any problems using RJ45 standard connectors
- Simple and fast status display via LEDs on the device
- Integral autocrossover function permits use of uncrossed connecting cables

## Benefits

## get Designed for Industry

- Reduction in assembly costs and mounting space compared to use of external network components
- Fast commissioning, as no configuration is necessary
- Flexible expansion of the network by simply inserting the CSM

## Application

The CSM 1277 is an Industrial Ethernet switch of compact design for use in the SIMATIC S7-1200. The CSM 1277 can be used to multiply the Ethernet interface of the SIMATIC S7-1200 for simultaneous communication with operator panels, programming devices, other controllers, or the office world.
The CSM 1277 and the SIMATIC S7-1200 controller can be used to implement simple automation networks at low cost.

## Design

The CSM 1277 compact switch module offers all advantages of the SIMATIC S7-1200 design:

- Compact design;
the rugged plastic enclosure contains:
- $4 \times$ RJ45 sockets for connecting to Industrial Ethernet
- 3-pole plug-in terminal strip for connection of the external 24 V DC supply on the top
- LEDs for diagnostics and for status display of the Industrial Ethernet ports
- Simple mounting on the mounting rail of the S7-1200
- Fanless and therefore low-maintenance design
- The module can be replaced without using a programming device

## Function

- Multiplication of Ethernet interfaces of the SIMATIC S7-1200
- Design of a small, local Industrial Ethernet network with three further nodes
- Automatic detection of data transfer rate by means of autosensing and autocrossover functions
- LEDs for diagnostics and for status display

Network topology and network configuration
Various network topologies can be implemented using the CSM 1277 compact switch module:

- Connection of SIMATIC S7-1200 in linear topology: at least one RJ45 connection of the SIMATIC S7-1200 remains vacant, e.g. for connecting a programming device (PG)
- Connection of SIMATIC S7-1200 to a higher-level network in a tree/star topology: at least two RJ45 connections of the SIMATIC S7-1200 remain vacant, e.g. for connecting a programming device/operator panel (PG/OP)
- Design of a small, local network with a SIMATIC S7-1200 and three further Ethernet nodes

## Configuration

The CSM 1277 compact switch module is an unmanaged switch and need not be configured.

## Diagnostics

The following information is displayed on LEDs on the device:

- Power
- Port status
- Data traffic

CSM 1277 unmanaged

## Overview

- The ideal entry level series of $3.8^{\prime \prime}$ to $15^{\prime \prime}$ for operating and monitoring compact machines and plants
- Clear process representation thanks to use of pixel-graphics displays
- Intuitive operation using Touch and tactile function keys
- Equipped with all the necessary basic functions such as alarm logging, recipe management, plots, vector graphics, and language switching
- Simple connection to the controller via integral Ethernet interface or separate version with RS485/422

## Benefits

- Integral component of Totally Integrated Automation (TIA): Increased productivity, minimum engineering overhead, reduction in life-cycle costs
- Can be used even where installation space is restricted thanks to vertical configuring (4" and 6" devices)
- Short configuring and commissioning times
- Service-friendly thanks to maintenance-free design and long service life of the backlighting display
- Simple and user-friendly representation of process values thanks to, for example, input/output fields, vector graphics, trend curves, bar charts, text and bitmaps
- Graphics library available with off-the-shelf picture objects
- Can be used worldwide:
- 32 languages can be configured (incl. Asian and Cyrillic character sets)
- You can switch between up to 5 languages online
- Language-dependent texts and graphics

## Application

The SIMATIC HMI Basic Panels can be used wherever compact machines and plants are controlled and monitored locally - in production, process and building automation alike. They are used in the most diverse sectors and applications.

## Design

The SIMATIC HMI Basic Panels are installation-compatible with the existing touch devices of the product family of Panels and Multi Panels.

- KTP400 Basic mono
3.8" STN mono

1 Ethernet interface (TCP/IP)
Touch screen and 4 tactile function keys

- KTP600 Basic mono
5.7" STN mono

1 Ethernet interface (TCP/IP)
Touch screen and 6 tactile function keys

- KTP600 Basic color
5.7" TFT with 256 colors

1 Ethernet interface (TCP/IP) or 1 RS 485/422 interface
(separate version)
Touch screen and 6 tactile function keys

- KTP1000 Basic color
10.4" TFT with 256 colors

1 Ethernet interface (TCP/IP) or 1 RS 485/422 interface (separate version)
Touch screen and 8 tactile function keys

- TP1500 Basic color
15.1" TFT with 256 colors

1 Ethernet interface (TCP/IP)
Touch screen

- No slot for SD/CF/MultiMedia Card, no USB interface

## Function

- Input/output fields for displaying and modifying process parameters
- Buttons are used for direct triggering of functions and actions. Up to 16 functions can be configured simultaneously on buttons.
- Graphics can be used as icons instead of text to "label" function keys or buttons. They can also be used as full-screen background images.
The configuration tool contains a library with extensive graphics and diverse objects. All editors with an OLE interface can be used as graphics editors, e.g. PaintShop, Designer or CorelDraw, etc.
- Vector graphics

Simple geometric basic forms (line, circle and rectangle) can be created direct in the configuring tool

- Fixed texts
for labeling function keys, process images and process values in different font sizes
- Curve functions and bars are used for graphical display of dynamic values
- Language switching:
- 5 online languages, 32 configuration languages including Asian and Cyrillic character sets
- language-dependent texts and graphics
- User administration (security) in accordance with the requirements of the different sectors
- authentication with user ID and password
- user-group-specific rights

## Basic Panels

Function (continued)

- Signaling system
- discrete alarms
- analog messages
- freely definable message classes (e.g. status/fault messages) for defining acknowledgment response and displaying message events
- message history
- Recipe management
- Help texts
for process screens, messages and variables
- Arithmetic functions
- Limit value monitoring
for reliable process control of inputs and outputs
- Indicator light
for indicating machine and plant statuses
- Scheduler for global function execution in case of global events
- Template concept for creation of screen templates (screen elements configured in the template appear in every screen)
- Simple maintenance and configuration thanks to:
- backup/restore of configuration, operating system and firmware on a PC using ProSave
- configuration download via MPI/PROFIBUS DP or Ethernet
- automatic transfer identification
- individual contrast setting and calibration (except KTP600)
- clean screen
- no battery required

## Configuration

Configuration is implemented with the engineering software SIMATIC WinCC flexible 2008 Compact or with WinCC Basic V10.5, which is a component of STEP 7 Basic V10.5 (only PROFINET-based device versions).

## Integration

The Basic Panels can be connected to:

- SIMATIC S7 controllers
- Non-Siemens controllers (applies for DP devices)
- Allen Bradley DF1
- Modicon Modbus RTU
- Mitsubishi FX
- Omron Hostlink/Multilink ${ }^{1)}$
- Non-Siemens controllers (non-Siemens drivers for PN devices)
- Modicon Modbus TCP/IP ${ }^{1)}$

1) WinCC flexible 2008 SP2 and higher

Note:
Further information can be found under "System interfaces".

## More information

Additional information is available in the internet under:
http://www.siemens.com/panels

Note:
Do you require a specific modification to or supplement for the products described here? Look in the catalog ST 80 under "Customized products". We provide information there about additional and generally available sector products, and about the customer-specific modification and adaptation options.

Software

## Overview

- Software for the SIMATIC S7-1200

Additional informationen see page 7/2.

- Functions for all phases of the automation project:
- configuring and parameterizing the hardware
- specifying the communication
- programming in LAD (Ladder Diagram) and FBD (Function Block Diagram)
- configuration of the visualization
- test, commissioning, and service

The following is available:

- STEP 7 Basic
